SERVEURMONITOR
MODULE

Advantages

Being constantly aware of current or potential problems means you can offer your clients the right solutions.

With detailed reports on their computer use, you can keep your clients informed at all times and tailor your services to their needs.

Our solution will help improve your technical support and sales teams' performance, boosting your image and level of client satisfaction.

SERVEURMONITOR is an ASP service.

There is no technical platform for you to manage, and no need to invest in additional staff or resources. We use secure, non-intrusive technology.

Your clients are in good hands ... yours
